Rocket® software

Software License Tracking System

When beginning the creation of this product, our mission was to develop and deploy a license tracking system that could manage the installation and use of external software.

The goal of our product is to assist Buzzword Software Solutions in avoiding legal and financial consequences associated with expired or superfluous software licenses.

Stakeholders
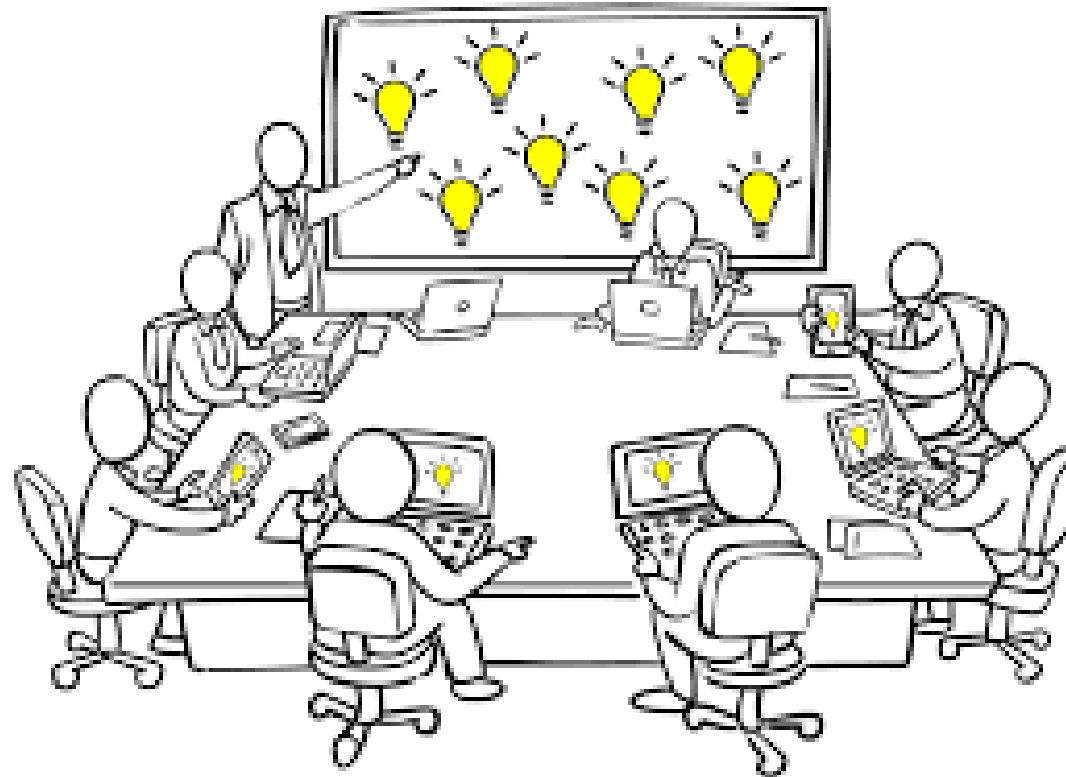

Primary
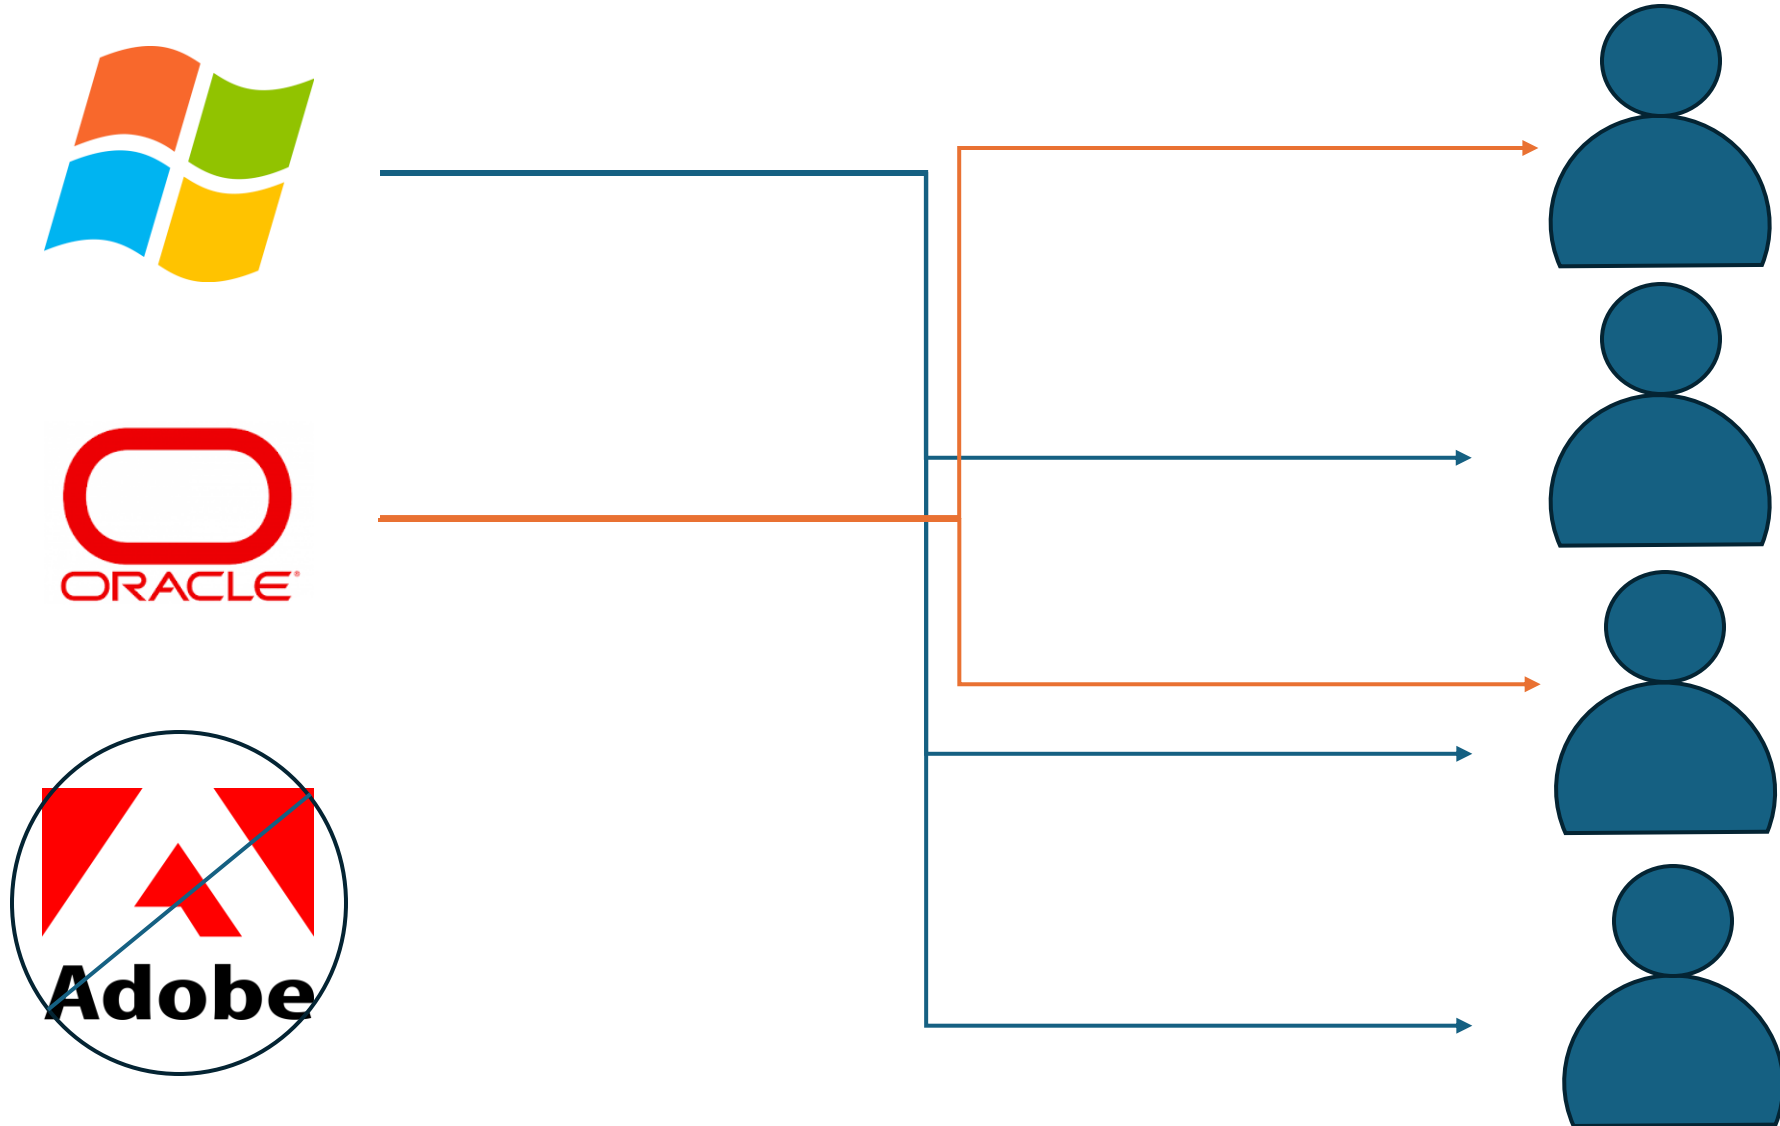

- The Legal Department
- IT Personnel
- Managers
- Employees

Secondary
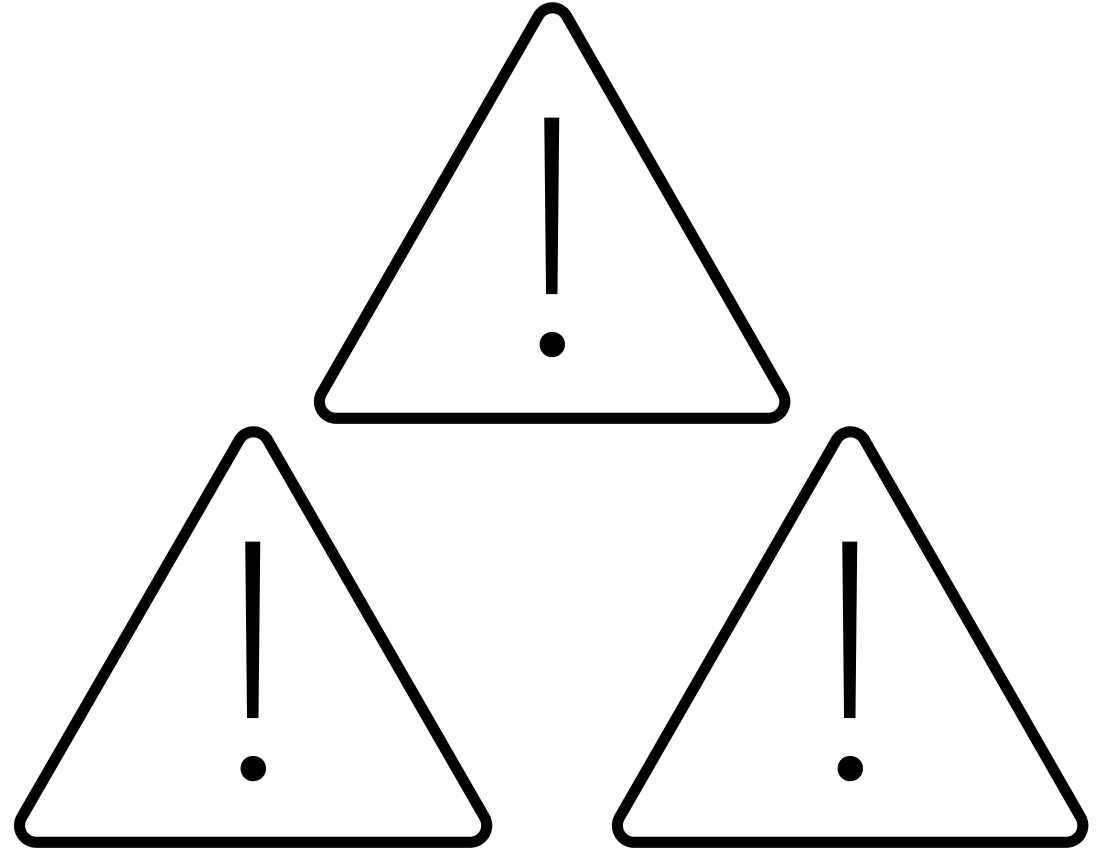

- Database Admins

Vision Statement
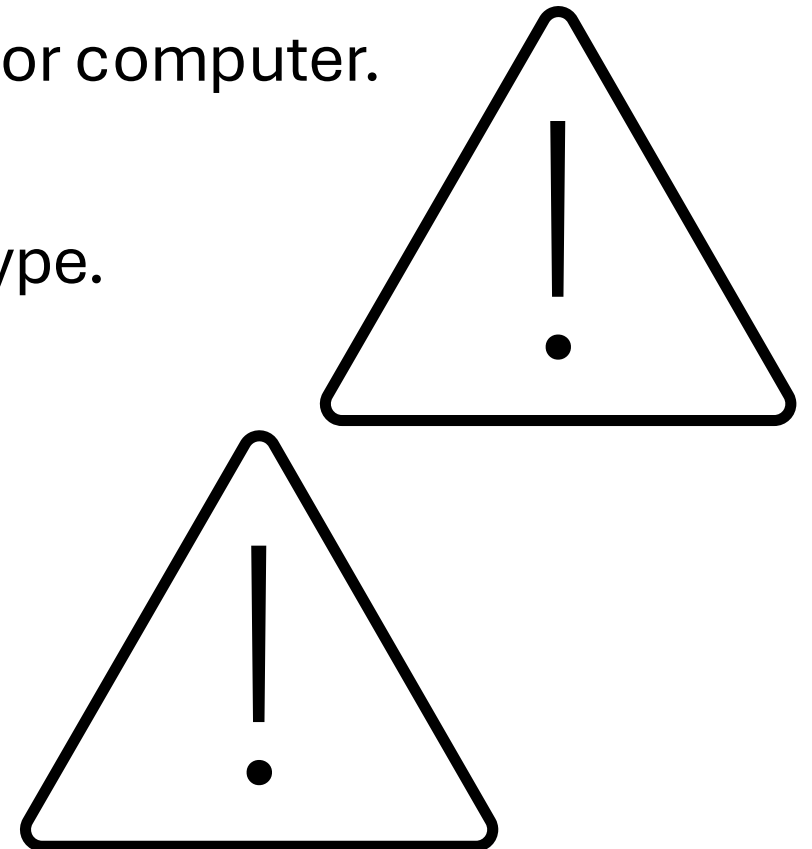

Product Features

High Priority Requirements

- The ability to add or delete a single license.

- Secure authentication and authorization for each user.
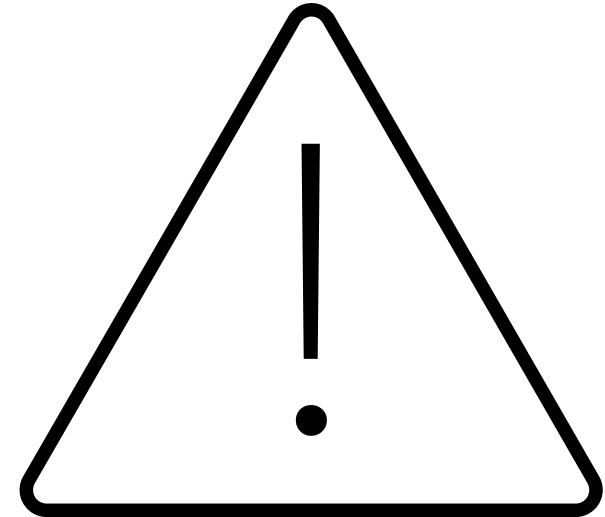

Medium Priority Requirements

- The ability to query licenses by type, date, cost, and other attributes.

- The ability to link an existing license to a person or computer.

- The ability to group licenses into categories by type.

- The ability to update a single license.

- Backup system for the database.

- Logging of all changes made to the database

Low Priority Requirements

- The ability to query licenses by the person they're assigned to.

- The ability to search by location, employee, or license.

Use Cases

Q & A
